

Trends in Genetics

April 2018, Volume 34, Number 4, pp. 247–326

TrendsTalk

- 247 **How Do You Design Undergraduate Genetics Laboratory Courses?**
- 249 **Do you incorporate recent literature or themes from your own research into your genetics courses?**

Spotlights

- 253 **A Toolkit of Engineered Recombinational Balancers in *C. elegans*** *Hillel T. Schwartz and Paul W. Sternberg*
- 255 **Sphingolipid Turnover Turns Over the Fate of Aneuploid Cells** *Zuzana Storchová*

Reviews

- 257 **Defining B Cell Chromatin: Lessons from EBF1** *Sören Boller, Rui Li, and Rudolf Grosschedl*
- 270 **Discoveries of Extrachromosomal Circles of DNA in Normal and Tumor Cells** *Teressa Paulsen, Pankaj Kumar, M. Murat Koseoglu, and Anindya Dutta*
- 279 **Regulatory Potential of the RNA Processing Machinery: Implications for Human Disease** *Kirstyn T. Carey and Vihandha O. Wickramasinghe*
- 291 **PRDM9 and Its Role in Genetic Recombination** *Kenneth Paigen and Petko M. Petkov*
- 301 **Supervised Machine Learning for Population Genetics: A New Paradigm** *Daniel R. Schrider and Andrew D. Kern*
- 313 **Caught with One's Zinc Fingers in the Genome Integrity Cookie Jar** *Caroline K. Vilas, Lara E. Emery, Eros Lazzerini Denchi, and Kyle M. Miller*

Correction

- 326 **Deregulation of CRTCs in Aging and Age-Related Disease Risk** *Caroline C. Escoubas, Carlos G. Silva-García, and William B. Mair*

On The Cover: Classical statistical analysis has often been used to integrate and study population genetic data. Recently, machine learning methods have been applied to population genetics and early applications indicate that they outperform the more traditional approaches. On pages 301–312 in this issue, Schrider and Kern discuss recent advances in using machine learning for population genetics including recent examples as well as future directions. Cover image from istock/Arthead.
